## Executive Summary

The Ministry of Water, Energy and Climate Change requires a multi-sectoral Strategic Plan, underpinned by a strong community consultation process to prioritize investments. These include investments that are made from the County budget, and also by other actors intending to contribute to water, energy and climate change in the County. Lack of such a strategy and consultation process in Isiolo County, held back progress and limited the effectiveness of many County and donor-supported interventions in the past.

This report gives the main findings from a series of Sub-County level consultations and preparatory technical meetings. The meetings were conducted by County Government's Ministry of Water, Energy and Climate Change, RAP and IIED. The meetings included participation by over 100 representatives of local customary resource user associations, women's groups, formal water resource user associations, water committees, irrigation committees, ward adaptation planning committees and others. These included women. The sub-county consultation meetings were conducted in appropriate languages, depending on the mix of participants. The technical meetings were primarily in English, and included some discussion of translation issues and challenges for the facilitation of effective local consultations.

This was the first time that such an approach to planning had been explored by the County Officers. It was appreciated and enjoyed both by the officers and by the participating community representatives.

Strategic planning is needed in order to rebalance the threats and opportunities created by the annual cycle of droughts and floods and coordinate the efforts of local, national and international actors. Key elements of the strategic planning approach include:

- i) Scientific tools, databases, systems and capacities to observe and monitor climate effects, extractions and flows through the catchment;
- ii) Clean, affordable and friendly technological solutions to redistribute and conserve water and energy supplies where they are needed within the catchment, particularly during both drought and floods;
- iii) Inclusive institutions, including active local participation both formally established and customary, to prioritize, guide, supervise and maintain the necessary information systems and infrastructure.

Lively discussion of water service levels and priorities with Isiolo Water and Sewerage Company representative. Caroline King-Okumu

Priorities have been identified in relation to these three essential aspects of strategic planning for water, energy and climate change in arid environments. The next step toward the preparation of Isiolo County Officers' Strategic Plan for Water, Energy and Climate Change (2017-21) consists in a multi-stakeholder meeting to be organized by the County Officers. The Sector Strategic Plan is intended to feed into the preparation of the next County Integrated Development Plan (5-year timeframe), as well as the annual budgeting for the County Government and its development partners.

The recommendations should also support and feed into ongoing catchment level planning, as well as broader national planning debates in Kenya, particularly those concerning the Arid and Semi-Arid Lands (ASALs). The overall objective of the Strategic Plan is to enable Isiolo County and its neighbouring ASAL counties in Kenya and the Horn of Africa to achieve their full potential as the crucibles of national and global prosperity, security and spiritual well-being.

Focus Group discussion on domestic and institutional uses of water and energy. Caroline King-Okumu

## Introduction

The Kenyan County Governments Act (2012, 104 (3)) requires county governments across Kenya to designate departments, sub-counties and Wards as planning authorities in order to plan how best to protect and develop their natural resources. In Isiolo County, the Ministry of Water, Energy and Climate Change is developing the multi-sectoral strategic plan to achieve the following objectives:

- Sustain and enhance the natural resource base, including water, energy and other resources;
- Enable the county officers to provide required services to the populations in the County, including safe and affordable access to water, energy, sanitation and environmental services;
- Ensure effective participation and coordination in prioritizing and decision-making;
- Provide a framework for collaboration/partnerships between Isiolo County Government and other stakeholders/actors in the sector.

Sub-County level planning structures are not yet established in Isiolo or other parts of Kenya. However, the County Government Officers have worked with County- and Ward-level Adaptation Planning Committees to prepare and series of technical meetings and 3 sub-county level consultations for a Sector Strategic Plan for Water, Energy and Climate Change. The consultations included representatives of the Isiolo Water Service Company, as well as more than one hundred water management committees, resource user groups, women's groups, community leaders and religious associations that were mobilized through 5 Ward Adaptation Planning Committees. Technical support, preparation and discussion was provided by the officers of WRMA, KMD and various research institutes who took part in the preparatory technical meetings.

Strategic planning is needed in order to rebalance the threats and opportunities created by the annual cycle of droughts and floods and coordinate the efforts of local, national and international actors. Key elements of the strategic planning approach include:

- i) Scientific tools, databases, systems and capacities to observe and monitor climate effects, extractions and flows through the catchment;
- ii) Clean, affordable and friendly technological solutions to redistribute and conserve water and energy supplies where they are needed within the catchment, particularly during both drought and floods;
- iii) Inclusive institutions, including active local participation both formally established and customary, to prioritize, guide, supervise and maintain the necessary information systems and infrastructure.

This report summarises priorities in relation to these three essential aspects of strategic planning for water, energy and climate change in arid environments, as identified through the 3 Sub-County level planning consultations and preparatory technical meetings. It is intended to inform the preparation of Isiolo County Officers' Strategic Plan for Water, Energy and Climate Change (2017-21). The recommendations also support and feed into ongoing catchment level planning, as well as national planning debates in Kenya. They are intended to enable Isiolo County and its neighbouring counties in Kenya and the Horn of Africa to achieve their full potential as the crucibles of national and global prosperity, security and spiritual well-being.

## Background to the Cross Sector Strategic Plan

The major challenges identified in the Sector are:

1. **Water scarcity:** 65% of the county is classified as ‘very arid’. Accessing reliable water sources in some areas is a major constraint. This has led to continual use of water bowsers which is an expensive undertaking. Water use efficiency is not well promoted and understood.
2. **Dynamic ecosystems:** Seasonal and inter-annual climatic changes can have dramatic effects on the balance processes affecting ecosystem productivity and water and food security, particularly during droughts and floods
3. **High cost of energy for water supplies:** Due to fluctuation of fuel costs, including unpredictable price-rises, it has been very costly to run the water supply facilities using diesel-powered Gensets
4. **Poor water quality:** the high salinity of water from some boreholes has resulted in their underutilization. The county has no capacity to put up modern water purification plants. Catchment management is also required to ensure quality and prevent contamination.
5. **Institutional challenges:** Underfunding, lack of capacities, and governance issues.

The Strategic Plan will follow the County Policies for the Water Sector and for the Energy and Climate Change Sectors (now under development). It will guide the County Government in its endeavors to address these challenges in partnership with all stakeholders and donors with interest in the Climate Change, water and energy sectors in Isiolo. Consultation will be an essential and iterative part of the development and implementation of Strategic Plan. The County Adaptation Planning Committee (CAPC), Ward Adaptation Planning Committees (WAPCs) and local customary institutions (*Dedha*) will play a key role in these consultations. The Draft Strategic Plan will be in place by May, 2017, as part of the budget planning for the County that will be decided in June, 2017.

In line with the County Integrated Development Plan (CIDP), Strategic planning at the County level focuses on 5-year periods, with annual rolling plans submitted for funding in of May each year. Only one year remains with the current strategic planning period (2013-2017). Therefore, this Strategic Plan may be considered a critical forerunner to the following CIDP and Sector Plan for 2017-21, bearing in mind the established national targets for improved water, energy and environmental services by 2030. It is also worthy of note that indicators and targets relating to the international Sustainable Development Goals are now under consideration. Information is available concerning current international targets for safe and affordable access to water, sanitation, energy and environmental services<sup>1</sup>, using the JMP definitions of safe water and sanitation<sup>2</sup>.

The Strategic plan is guided by Vision 2030. In parallel to the County Level Strategic Planning, Catchment level planning for the Ewaso Ng’iro North Catchment Area (ENNCA) is ongoing at the National Water Resources Management Authority (WRMA). Also, the national Water Policy (2002) is under revision to ensure alignment with the new Constitution. The County Level Strategic Plan will therefore strengthen the inputs from the county to these broader processes.

---

<sup>1</sup> <http://www.un.org/sustainabledevelopment/water-and-sanitation/#>

<sup>2</sup> The Joint Monitoring Programme (JMP) has defined safe drinking water as follows:

- *Drinking water* is water used for domestic purposes, drinking, cooking and personal hygiene;
- Access to drinking water means that the source is less than 1 kilometer away from its place of use and that it is possible to reliably obtain at least 20 litres per member of a household per day;
- Safe drinking water is water with microbial, chemical and physical characteristics that meet WHO guidelines or national standards on drinking water quality;
- Access to safe drinking water is the proportion of people using improved drinking water sources: household connection; public standpipe; borehole; protected dug well; protected spring; rainwater.

The strategic plan takes a systemic and holistic approach to strengthening the resilience and productivity of the economy of Isiolo. This involves integrating within one Sector:

- a) **Water and Irrigation Services.** Including water supplies for domestic, livestock, agricultural and other institutional, social and economic uses. Also sanitation and water treatment services.
- b) **Climate Change and Energy Services.** Including contributions by both public sector and private actors that provide power to water and sanitation systems either from diesel or renewable sources<sup>3</sup> and as well mainstream how to cope and mitigate climate change in future.

The success of the strategic plan will depend on coordination and integration of local/customary institutions for community-led management of natural resources with formal government institutions at the county-level that are responsible for policy, planning and budgeting. It will also build on the foundations put in place by the draft legislation now under consideration by the County Assembly on Natural Resource Management, Climate Change and intended draft policies for Water and Environment, Natural Resources and Energy.

Community members and planners during focus group on productive uses of water and energy in Merti meeting. Ibrahim Jarso

3 Electrification is dealt with under a separate strategy

## Water, Energy and Climate in Isiolo County

Water resources in Isiolo County are shared with other upstream and downstream users of the surrounding Catchment (WRMA, 2013b, WRMA, 2014). ENNCA home to around 4 million people, 60% of whom live in water stressed downstream counties of Isiolo, Marsabit, Wajir, Garissa and Mandera. The catchment includes transboundary water, grazing resources, and populations that interconnect with the neighbouring areas of Ethiopia and Somalia.

Following the rains in the high elevation parts of the catchment, water flows down through the catchment along riverbeds and aquifers into the Ewaso Ng'iro North river that runs through the centre of Isiolo County. This makes the population in the low-lying areas of Isiolo vulnerable to floods. Water users, including humans and livestock, from the surrounding counties and countries also migrate in toward the Ewaso Ng'iro riverbed at the centre of the County, particularly during dry seasons and droughts. Providing water, pasture and other services to the expanded population increases pressures on the local and national institutions during the drought periods.

The Ewaso Ng'iro North Catchment Area (ENNCA) has a total extent of 210,226km<sup>2</sup> (36% of the total area of Kenya), average annual rainfall of 411mm, and an estimated 1,933 m<sup>3</sup>/year/capita of total renewable water resources per capita (WRMA, 2013b). Yet in Isiolo county, which is located at the centre of the catchment, each year the National Drought Management Authority (NDMA) reports that vulnerable households have been surviving on as little as 8 litres per person per day (GoK, 2016, GoK, 2015a). This is partly because during the dry seasons and droughts, humans and livestock migrate in to Isiolo from other counties and countries across the catchment, in search of water and pasture around the riverbed. This means that the population that is in the county at these times is far larger than its water service infrastructure can support and sustain without pressure.

Some water service investments set up through proper participation of the community are vulnerable to destruction from outside pastoralists because of lack of ownership. During the periods of extreme climate and water stress, it has been difficult to estimate how large the population in the county actually is, let alone to plan to meet their needs. At the present, local management associations and the Isiolo water service company maintain continual observation of extractions but they are not formally monitored and accounted for through the existing catchment management framework (WRMA, 2014).

Existing pipelines and pumping systems that transfer water from one part of the system to another frequently malfunction and break down due to poor engineering and harshness of the environment to some of the facilities used in its construction. Additional transfers and dams are periodically recommended to regulate flows through the catchment (e.g. in WRMA, 2013b). But in the meantime, the natural flows through the catchment that used to transfer water from upstream are continuing to reduce due to increasing upstream extractions for irrigation and other uses.

Although an increase in rainfall has been predicted by 2030 (WRMA, 2013b), uncertainty and variability mean that this cannot be expected to counterbalance the effects of increasing extractions that are already being observed (Mutiga et al., 2010, WRMA, 2013a).

## Preparatory Process

### Identification of Need for Support at the County Level

The Isiolo county government requested support from IIED. IIED agreed to provide technical support and allocated resources from its own budget to cover staff time, travel and activities.

The county technical officers requested financial support from the County Adaptation Fund. The County Adaptation Planning Committee (CAPC) reviewed the proposal, discussed and agreed to support it.

The technical support team held several preparatory meetings and prepared plans for the community consultations. Information about the intended process was shared with the CAPC. The CAPC and WAPCs reviewed the information, offered improvements and translations and shared it within their wards.

### Design of Sub-County Consultation Meetings

The County Technical Officers worked with RAP and WAPCs to identify participants for the Sub-County level consultation meetings. The numbers of representations from the various local institutions were agreed on considering factors like vastness of the sub county, influence and interests of stakeholders.

The tables below indicate the key community and government institutions represented in three sub-county level consultation meetings that were convened by the County Government Officers with support from WAPCs, RAP and IIED.

Each of the consultation meetings lasted for two days. All of the meetings followed the same format. The first day consisted in plenary presentations and discussions so that the officers and participants could clarify and agree the objectives and priorities for the strategic planning. The WAPCs played an important role during the meetings, raising issues on behalf of their constituencies.

The second day was devoted to three focus group sessions and restitution on the following topics;

1. Water, energy and natural resource management (including urban and rural, formal WRUAs and informal/customary)
2. Domestic and institutional uses of water, energy and other natural resources (including settled and mobile households from urban and rural areas)
3. Commercial water, energy and natural resource uses (including pastoralists, agro-pastoralists, water vendors, restaurateurs and food vendors, hotels, barbers, and others)

Ward Administrator addressing Isiolo and Oldony'iro Consultation Meeting. Caroline King-Okumu

Focus Group discussion on ways forward for to improve services to domestic and institutional users of water and energy. Caroline King-Okumu

## Next Steps

- County government to confirm support for a multi-stakeholder meeting
- RAP to finalize all the community consultation reports and present the overview report in the coming Multi-stakeholder Meeting
- Community representatives to consult widely and prepare for the multi-stakeholder meeting to be held in early 2017
- Draft plan on county website

Restitution during Merti meeting. Caroline King-Okumu

# Major Findings

## 1. Monitoring flows in and out (scientific tools and databases)

Upstream and downstream relations and cooperation are very important for the management of water, energy and climate in Isiolo County. A clear and factually sound understanding of the flows of resources and people across the county boundary should provide the basis for managing these relations and interdependencies. The presence of resource users in the county is monitored and managed at the local level by the resource- user associations, through their water-point managers (additional recommendations in relation to these institutions are included in section 3).

Climate and hydrological effects are monitored through a network of meteorological stations. At present this network is in poor condition and information is not available to planners to help them to estimate runoff and recharge patterns and flows that could be captured and conserved for productive uses (Njoroge, 2017). Underground conditions are also not well understood (WRMA, 2013a, Blandenier, 2015). This causes waste of expenditure on drilling of unproductive boreholes to provide water during the dry seasons. There is therefore a need for better hydrogeological information management and training of surveyors (Jarso, 2016).

### Priority strategic actions include:

- Improve databases on water resource extractions and economic uses of water downstream to strengthen the economic case against over-extraction upstream (feeding into national report on SDG 6.4.2).
- Improve local observation networks for climate, ground and surface water levels and quality to be connected to a centralized database at the county, and also to educational and capacity building institutions, as well as to WRMA, NDMA and KMD;
- Improve ex-post analysis and forecasting of drought and flood events and decision-support for necessary actions – e.g. diversion of floodwaters, water harvesting, etc.;

Water, energy and resource managers meeting. Ibrahim Jarso

## 2. Improving water and energy service infrastructure (hardware)

In 2010, Isiolo Water and Sewerage Company (IWASCO) was serving a population of 34,168 (around 20% of the registered resident population in the county) with a capacity of 3,220m<sup>3</sup>/day. Non-revenue water was estimated to amount to 51% of the total supply to the town (WRMA, 2013bMG – T – 2, WRMA, 2011). Ongoing efforts to improve the piped water network have encountered set-backs due to reduced flow volumes in the Isiolo river. To source sufficient water supply for distribution through the network, the latest plans now involve rehabilitating water networks, reducing leakages and non-revenue water, digging twelve new boreholes and construction of two water treatment plants to provide water that will be sufficiently clean to reuse. The county government is experimenting with new financing models in hopes to enable the use of renewable energy at the treatment plants.

High priority improvements to extend the reach of other water supply systems in the other towns in Isiolo County, such as Merti and Garbatulla towns, also involve installation of additional storage infrastructure and pipes. Garbatulla town reticulated network is also in need of rehabilitation. This is not operated by IWASCO, but is maintained and operated by a water management committee. Outside the towns, the population are directly dependent on water from boreholes, shallow wells, pans, sand-dams (and also directly from the river where and when it is flowing) (GoK, 2015b). These sources are managed by resource user associations, including customary associations (Tari and Pattison, 2014). When there are breakdowns or needs that they are not able to handle unassisted for improved infrastructure, fuel or trucks, the local associations call on their County Government for support.

The costs to water users in all of the supply systems are still mainly determined by the energy costs for pumping and transporting the water either through pipes, canals or trucking systems. Some reductions in these costs have been enabled through investments in solar-powered systems, and further such reductions may still be possible. However, increased investments in human resources and capacities to maintain and operate the systems are still needed (see meeting reports at: [www.adaconsortium.org](http://www.adaconsortium.org)).

### Information available to planners concerning energy access in Isiolo County

Of the 31,326 households in the county; only 2,500 have access to electricity (GoK, 2013, KNBS, 2009). 85% of the households rely on fire wood as their main source of power, mainly for cooking. This has partly contributed to a decline in tree cover. 9% of the residents use petroleum products for cooking. For lighting, 29% use electricity, 41.5% use petroleum products, 8.5% use wood fuel while 13.8% use solar. The rest of the population (7.3%) use other means.

In addition to supplying basic human needs, water and energy uses in Isiolo include institutional, commercial and industrial uses. 85 percent of the trading centres and the majority of schools and health facilities are not connected with electricity.

To secure an electricity connection for a radio station in Garbatulla required over one year and 150,000Ksh (personal communication, Ibrahim Jarso). Around 2000 businesses are presently registered in Isiolo (RoK, 2016). The volumes of water and energy that they require and use are not well understood. Nor are the relative values to society of these various different commercial uses.

It has so far been estimated that 1.36 million cubic metres (MCM) of water was used to support livestock production in Isiolo during 2013/14, contributing US\$13–22/m<sup>3</sup> to the economy through meat and milk production (King-Okumu et al., 2016). Irrigation and tourism were estimated to consume more and earn less. Yet over the coming decades current plans still indicate increases in the volumes of water to be used in irrigation (WRMA, 2013a, WRMA, 2013b). New demands for water that will be associated with a resort city and international airport, planned almost a decade ago for construction in Isiolo (GoK, 2007) have still not yet been assessed.

### Priority strategic actions include:

- Continue to increase the extent, duration, quality affordability of access to water for household uses by settled, mobile and transient households in consultation with the water users
- Increase revenue available for investments in human capacities while reducing operating costs to individuals and public authorities by converting to low-cost and renewable energy sources, and avoiding breakdowns and high-cost emergency solutions
- Plan for and invest in the volumes of water and energy needed for present and future commercial and industrial uses. Assess their value and identify opportunities for cost-recovery

Working Group on Domestic and Institutional Uses of Water and Energy, Garbatulla. Ibrahim Jarso

### 3. Building local institutions and capacities (software)

Droughts and water stress persist due to poor catchment management, slow responses, disconnected institutions, information blockages and lack of capacities. Strategic planning should include investments in improving institutions, information systems and capacities. Without improved institutional support to ensure sustainability, the recommendations presented in previous sections will not be achieved. Attention to these challenges is needed both upstream and downstream, and across sectors and levels of government, from local to national and international (WRMA, 2013b).

At the local level, there is a need for improved capacities, transparency and accountability to ensure the performance of the water service provider, water management committees, and resource user associations (both customary and formally established) (King-Okumu, 2015, Tari and Pattison, 2014). Through their strategic planning process in 2016, County water planners in Isiolo have engaged with over one hundred such institutions, representing upward of 150,000 water and energy users in the County (see meeting reports at: [www.adaconsortium.org](http://www.adaconsortium.org)). The objective of this engagement was to ensure that the resource users' priorities could drive the formulation of a Strategic Plan ensuring that the devolving County Government can provide more effective support to them as they manage their resources and adapt to climate-related challenges.

At the county level there is an acknowledged need for improved cross-sectoral coordination, and prioritization of investments in water, energy and climate change agendas. This includes investments that are made from the County budget, and also by other actors intending to contribute to sustainable water, energy and environmental service delivery in the County. The lack of such coordination has limited the effectiveness of many County and donor-supported interventions in the past.

A temporary improvement to coordination was briefly provided when an NGO (UNICEF) established a water coordination forum (WESCORD). More recently, a County Steering Group and County Adaptation Planning Committee have been convened by the NDMA. However, as the county government is strengthened, it could be able to progressively assume this necessary function more directly. A recent step in this direction, taken in 2015, was a flood response task force that was headed by the County Directorate for Water, with support from the NDMA.

#### **Priority strategic actions include:**

- Transparency and accountability improved for water management committees through investment in institutional processes and training of staff
  - Cross-scale linkages connecting and strengthening the existing local associations and linking upward through ward, sub-county, county, catchment, national and transboundary level institutions
  - Capacity building of County Officers for Water, Energy and Climate Change, and training of a new cadre of water, energy and climate technicians and managers with skills to operate under variable and uncertain climatic conditions

## Taking stock of gaps in water supply to institutions in Garbatulla. Ibrahim Jarso

## Conclusions

The devolved strategic planning process that the Isiolo County Water Officers have led at the Sub-county level has achieved a notable success, thanks to the support from the CAPC and WAPCSs. The representatives of the 100+ local natural resource management associations were able to discuss the strategic planning challenges and priorities for water energy and climate change together with the County Officers and identify ways forward. This process could be extended to the rest of the catchment, starting through the CAPCs and WAPCs that have recently been established in the neighbouring counties of Wajir and Garissa and a transboundary resource management dialogue begun with resource users from the county of Marsabit. The strategic planning process should be accompanied by a corresponding expansion of necessary technical support and capacity building.

## Appendix 1: List of Participants

### 1.1: Participants in Isiolo and Oldonyiro Consultation Meeting

S. No.	Name	Area/Organization	Gender (M/F)
1.	Cosmus Sike	Manyatta Zebra Committee	M
2.	Joseph Lokuniyat	Kiwanja water Project	M
3.	Jane Njeri	Mfinyanzi Group	F
4.	Abdi Boru	Kilimani Water Project	M
5.	Jacob Egen	Youth	M
6.	Mohamed Jattani	Isiolo Youth	M
7.	James Mami Lechakwei	Oldonyiro water committee	M
8.	Grace Lolim	Isiolo Water Committee	F
9.	Hussein Huka	Radio Administrator	M
10.	Loloibon Bernard	Oldonyiro water	M
11.	Kuterei Lemantile	Oldonyiro water	M
12.	Francisco Letimalo	Oldonyiro WAPC	M
13.	Francis Lomkuny	Chumvi Yare water	M
14.	Lawrence Ekiru	Arimet	M
15.	Noah Esekon	Tractor	M
16.	Madina Dima	Tuluroba Women Group	F
17.	Celina Kathure	Mwangaza Isiolo	F
18.	Mohamed Ali	Isiolo water	M
19.	Habiba Kotile	Kambi Garba	F
20.	Joseph Waciuri	Isiolo Water	M
21.	Antanas Ekwam	Ngaremara Water	F
22.	Veronica Leagile	Oldonyiro Water	F
23.	Jackline Napoore	Chokaa Water	F
24.	Magdalene esokon	Attan Water	F
25.	Daud Mwingi	Waso water project	M
26.	Sadia Ibrahim	Waso water project	F
27.	Peter Moika	Oldonyiro WAPC	M
28.	Kadija Ibrahim	Kambi juu water project	F
29.	Guyo Abduba	Irrigation Officer	M
30.	Junius Njeru	Water Officer	M
31.	Ahmed Set	Islam Leader	M
32.	Abdia Gethi	Kilimani Water project	F
33.	Josphine Eregai	Ward Admin-Ngaremara	F
34.	Mary Waititu	Isiolo Water	F
35.	Lucy Ntepenika	Oldonyiro water	F
36.	Ali Godana	Isiolo Farmers Group	M
37.	Lordman Lekalkuli	NDMA	M
38.	Daoud Tari	RAP	M
39.	Ibrahim Jarso	RAP	M

S. No.	Name	Area/Organization	Gender (M/F)
40.	Gerald Nyari	Isiolo Water	M
41.	Luiza Lenyanguui	Oldoniro water project	F
42.	Daniel Kathukumi	Assistant Chief East location	M
43.	Lucy N. Mbaya	Kulamawe water	F
44.	Jarso Haro	Energy and Climate Change	M
45.	Lucia Ekwam	Assistant Chief	F
46.	Purity	Administration Police Isiolo	F
47.	Paul Egeny	Isiolo Water	M
48.	Yusuf Liman	KU Phd student	M
49.	Caroline King	IIED	F

## 1.2: Participants in Garbatulla Consultation Meeting

S. No.	Name	Area/Organization	Gender (M/F)
1.	Arero Molu	Dedha	M
2.	Hussein Abato	Chairman Water	M
3.	Adan Gababo	Sericho	M
4.	Mariam Huka Sama	Board RAP	F
5.	Omaru Abduba	Chairman Water Kinna	M
6.	Abduba Wario	Irrigation committee	M
7.	Abdi Siad Maalim	Duse Water	M
8.	Ibrahim Mohamed	Rapsu	M
9.	Mohamed Durow Adan	Modogashe	M
10.	Adan Bulle	Iresa boru	M
11.	Mohamed Abdi Kadir	Garbatulla	M
12.	Hassan Guyo	Kinna	M
13.	Mohamed Galgalo	Kinna	M
14.	Habiba Abdul	Garbatulla	F
15.	Hussein Duba	Radio Manager	M
16.	Hussein Golicha	WRUA-Kulamawe	M
17.	Abdullahi Dansoye	WRUA-Sericho	M
18.	Somo Jirmo	Gafarsa	M
19.	Mumina Gobo	Ward Administrator	F
20.	Edin Boru	Kinna Dedha	M
21.	Somo Roba	Chairman Dedha	M
22.	Mohamed Jillo	KICBI	M
23.	Hassan Kanu Jirma	Garbatulla	M
24.	Adan Denge	Garbatulla Water Board	M
25.	Habiba Abduba	Gafarsa	F
26.	Nura Salesa	Malka Daka	F
27.	Fatuma Madera	Chief Garbatulla	F
28.	Amina Katelo	Kinna	F
29.	Nasibo Ali Jare	Rapsu	F

S. No.	Name	Area/Organization	Gender (M/F)
30.	Rukia Diba	WAPC-Kinna	F
31.	Rukia Ali	Garbatulla	F
32.	Hawai Gufu	WAPC-Sericho	F
33.	Adan Guyo Bankare	Kinna	M
34.	Mohamed Digaji	Irrigation Committee	M
35.	Hussein Konso	WAPC-Garbatulla	M
36.	Boru Jarso	WAPC-Sericho	M
37.	Abdikadir Salesa	Kulamawe-Dedha	M
38.	Kosi Iyya	Dedha-Kulamawe	F
39.	Victor Adaka	Ministry of Water	M
40.	Romano Mirianga	Sub county water officer	M
41.	Osman Bagaja	Director Environment	M
42.	Dahera Huka	Malka Daka	F
43.	Ibrahim Jarso	RAP	M
44.	Daoud Tari	RAP	M
45.	Malelo Adan	Dedha Garbatulla	F
46.	Josephat Anjiri	Irrigation Officer	M
47.	Roba Galgalo	Garbatulla	M
48.	Julius Lemomo	D.O Garbatulla	M
49.	Francis Macharia	D.O Office	M
50.	Bashir Jillo	County Water Director	M

### 1.3: Participants in Merti Meeting

S. No.	Name	Area/Organization	Gender (M/F)
1.	HawoDabaso	Youth	F
2.	Boru Godana	MID-P	M
3.	Caroline King	IIED	F
4.	KassimGufu	WAPC	M
5.	DibaGolicha	RUA	M
6.	Mohamed Koricha	Dedha	M
7.	Turo Buke	RUA	F
8.	Mohamed Wako	RUA	M
9.	Adan Fayo	Irrigation Committee	M
10.	Mohamed Molu	Merti sub county water Officer	M
11.	Victor Adaka	County water Services	M
12.	Bashir Jillo	County Director	M
13.	Jarso Haro	Merti sub county irrigation officer	M
14.	Ibrahim Jarso	RAP	M
15.	Adan Kullo	Irrigation Committee	M
16.	Osman Bagaja	County Energy Officer	M
17.	Abdullahi Huka	Cherab Ward Administrator	M
18.	NasiboKanu	WAPC	F

S. No.	Name	Area/Organization	Gender (M/F)
19.	AbdirahmanHalkano	Dedha	M
20.	JedidaNkirote	MID-P	F
21.	FatumaDuba	WAPC	F
22.	KuleHalkano	WRUA	F
23.	HadijaHuka	Water Management Committee (Korbesa)	F
24.	Mumina Ali	Kiondo women group	F
25.	Abdikadir Jattani	MID-P	M
26.	Abdi Roba	Water Management Committee (Bulesa)	F
27.	Hassan Dida	Chief Merti	M
28.	Abdi Mohamed	WAPC	M
29.	Mohamed Abduba	WRUA	M
30.	BoruBidu	Water Committee mataarba	F
31.	Rehema Jillo	Water Committee bassa	F
32.	Halima Godana	Merti-Water	F
33.	MalichGuyo	Biliqo-Water	M
34.	Abdi Olo	WRUA	M
35.	Boru Wako	Irrigation Committee	M
36.	Abdi Hussein	RUA	M
37.	Hussein Bidu	WRUA	M
38.	HawoGolicha	Dima Adho-Water Committee	F
39.	Hassan Sime	Irrigation Committee	M
40.	DadheKampicha	Dedha	F
41.	Salad Godana	MID-P	M
42.	OrgeDuba	Chief-Goda	F
43.	Charles Wambugi	Sub county Crops Officer	M
44.	Bonus Hassan	Irrigation Committee	F
45.	DokatuHalkano	Machesa Women Group	F
46.	Gimbe Godana	Merti Water	M

## Appendix 2: Resource database

### 2.1: Isiolo and Oldonyiro

Name	Type	Use	Management	Quantity	Notes	Extraction
<b>Oldonyiro Ward</b>						
Dam and Intake	Dam	NULL	NULL	NULL	abstracts water to 715	NULL
Turbine	Turbine	NULL	NULL	NULL	electric turbine pumps water to Oldonyiro Water Tank	NULL
Lobarishereki Pan	Pan	Domestic/Livestock/ Wildlife	customary	too small! (100,000L max) 500 goats per day, lasts 2 months after rains	enhanced natural pan	open water
Namelok Hand Pump	Borehole	Domestic/Livestock	customary	100,000L per day	NULL	handpump
Ntipes Hand Pump	Borehole	Domestic/Livestock	customary	50,000L per day	pump broken	handpump
Lobarishek Hand Pump	Borehole	Domestic	NULL	50,000L per day	not functional, damaged by high river flows	handpump
Ngorika Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	RAAP	2000 goats per day for 6 months	NULL	buckets
Oldonyirpo Water Tank	Tank	Domestic	Oldonyiro Water Users Association	delivers to over 100 kiosks	six partitions, total capacity 800,000L	gravity fed from wassonyiro
Looseketet Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	100,000L per day	NULL	diesel genset and buckets
Oldonyiro Catholic Mission Borehole	Borehole	Domestic	catholic mission	100,000L per day	NULL	diesel genset
Protected Well	Shallow well	Domestic	Management committee	Serves about 3000 households	funded by actionaid	diesel genset
Adabal Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	2000 goats per day 6 months after rains	NULL	buckets
Loolchinge Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	2000 goats per day for 6 month after rains	NULL	buckets
RAAP Borehole	Borehole	Domestic	RAAP	100,000L per day	NULL	diesel genset
Lempoe Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	3000 goats per day permanent	NULL	buckets
Oldonyiro Catholic Mission Shallow Well	Shallow well	Domestic	catholic mission	50,000L per day	NULL	solar

Name	Type	Use	Management	Quantity	Notes	Extraction
Loosira Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	500 goats per day for 1 month after rains	NULL	buckets
Mlima Chui Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	60 households for 2 months after rains	NULL	buckets
Ntumodet Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	2-300 goats per day during rains only	NULL	buckets
Sheek Borehole	Borehole	Domestic	customary	not functioning	NULL	no extraction
Sheek Borehole	NULL	NULL	NULL	NULL	NULL	NULL
Parkuruk Pan	Pan	Domestic/Livestock	customary	2000 goats per day 3-4 months after rains	NULL	open water
Turra Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	3000 goats per day for 6 month after rains	NULL	buckets
Rumate Pan	Pan	Domestic/Livestock/ Wildlife	customary	600 goats per day for 1.5 months after rains	built 2011 soils drain quickly	open water
Rumate Sand Dam	Sand dam	Domestic	customary	Not used much, contains little water	NULL	buckets
Nontudu Pan	NULL	Domestic/Livestock/ Wildlife	customary	previously 2000 goats per day for 4 months after rains, now 900 for 2 months due to leakage	Pan	open water
Loruko Pan	Pan	Domestic/Livestock/ Wildlife	customary	3000 goats per day for 6 months after rains	built jun 2012 ground truth	open water
Tuale Borehole	Borehole	Livestock	customary	500 goats per day permanent	NULL	handpump
Tuale Pan	Pan	Domestic/Livestock/ Wildlife	customary	200 goats per day for 3 months after rains	NULL	open water
Longopito Hand Pump	Borehole	Domestic/Livestock	customary	50,000L per day	NULL	handpump
Lenguruma Pan	Pan	Domestic/Livestock/ Wildlife	customary	2000 goats per day for 4 months after rains	heavily silted, not used for a year as of sept 2012	open water
Longopito 2 Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	200 goats per day only during rains	broken	buckets
Longopito Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	600 goats per day, 2 months after rains	NULL	buckets

Name	Type	Use	Management	Quantity	Notes	Extraction
Milima Tatu Pan	Pan	Domestic/Livestock/ Wildlife	customary	1000 goats per day for 2 months	Badly silted intake damaged	open water
Longopito 2 Hand Pump	Borehole	Domestic/Livestock Wildlife	customary	50,000L per day	dry	handpump
Ngoro Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	700 goats per day, 3 months after rains	NULL	buckets
Longopito 3 Hand Pump	Borehole	Domestic/Livestock Wildlife	customary	50,000L per day	damaged by floods	handpump
Longopito 3 Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	400 goats per day, 1 months after rains	NULL	buckets
Longopito Pan	Pan	Domestic/Livestock/ Wildlife	customary	1000 goats per day for 3 months	built nov 2011, breached	open water
Loligiriai Hand Pump	Hand pump	Domestic/Livestock	customary	500 goats per day, 2 months after rains	NULL	hand pump
Loligiriai Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	500 goats per day, 2 months after rains (almost permanent)	NULL	buckets
Kawalash Rock Catchment Tank	Tank	Domestic	VWC	2x100,000L for ~ 4 months after rains	donkeys visit 3 times per week with jerry cans	buckets
Nomotonyi Rock Catchment	Tank	Domestic	NULL	100,000L capacity lasts ~2 months	NULL	tap
Lagaaman Sand Dam C	Sand dam	Domestic/Livestock/ Wildlife	customary	300 goats per day for 3 months after rains	NULL	buckets
Lagaaman Sand Dam B	Sand dam	Domestic/Livestock/ Wildlife	customary	400 goats per day, 4 months after rains	NULL	hand pump
Lagaaman Sand Dam A	Sand dam	Domestic/Livestock/ Wildlife	customary	700 goats per day, 6 months after rains (almost permanent)	NULL	hand pump
Chulumai Pan	Pan	Domestic/Livestock/ Wildlife	customary	1500 goats per day for 3 months after rains	NULL	hand pump
NdonyoLawai Pan	Pan	Domestic/Livestock/ Wildlife	customary	1000 goats per day for 2 months	built mar 2012	open water
Nontomia Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	300 goats per day, 1 month	NULL	buckets
Lengwenyi Pan	Pan	Domestic/Livestock/ Wildlife	customary	500 goats per day for 1 months	affected by siltation, then breached by high river flows	buckets

Name	Type	Use	Management	Quantity	Notes	Extraction
Sieku Handpump	Hand pump	Domestic	customary	3000L per day	NULL	hand pump
Sieku Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	2000 goats per day, Permanent	NULL	buckets
Lengwenyi Hand Pump	Borehole	Domestic/Livestock	customary	700 goats per day, Permanent	NULL	handpump
GSU Borehole	Borehole	Domestic	GSU	30,000L per day	NULL	diesel genset
Kipsing Sand Dam	Sand dam	Domestic	catholic mission	60,000L per day	used by mission and primary school, has filtration gallery	diesel genset
Kipsing Sand Dam 2	Sand dam	Domestic/Irrigation/ Livestock	customary	2000 Livestock per day	used for irrigation and livestock	diesel genset (small)
Mokori 2 Pan	Pan	Domestic/Livestock/ Wildlife	customary	2000 goats per day for 4 months after rains	built jan 2012 ground truth	open water
Catholic Mission Borehole	Borehole	Domestic	catholic mission	1000L per day	NULL	diesel genset
Kililio Hand Pump	Borehole	Domestic/Livestock	customary	50,000L per day	damaged by floods	handpump
Mokori 1 Pan	Pan	Domestic/Livestock/ Wildlife	customary	1500 goats per day for 3 months after rains	built mar 2012 ground truth	open water
Mokori Hand Pump	Borehole	Domestic/Livestock	customary	50,000L per day	NULL	handpump
Mokori Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	800 goats per day, 3 months	NULL	buckets
Nolmurgusian Rock Catchment	Tank	Domestic	customary	2x50,000L lasts ~ 2 months after rains	donkeys visit 3 times per week with jerry cans	buckets
Samanderi Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	1000 goats per day for 2 months	built mar 2012	open water
Lodomoru Pan	Pan	Domestic/Livestock/ Wildlife	customary	100 goats per day for 2 months	built mar 2011	open water
Noloroi Sand Dam	Sand dam	Domestic/Livestock/ Wildlife	customary	5000+ goats per day permanent	built mar 2011	open water
Ndonyoengala pan						
ndoyolahau pan

## Appendix 5: Example Meeting Schedule: Merti

### Day 1

#### Draft Agenda for Community Consultations:

9.00-9.30	Climate setting and Introduction-Shandey
9.30-9.40	Welcoming Remarks: Ward Administrator
9.40- 9.55	RAP/Mid-P (including explanation of the need for the Strategic Plan and next steps in process to include small focus groups, multi-stakeholder meeting, etc)
9.55-10.10	Presentation: Overview of Strategic Plan objectives and challenges by a County Officer
10.10-10.25	Remarks: WAPC to make remarks on behalf of the community about the needs for the Strategic Plan and the importance of the community consultation process
10.25-10.40	Tea Break
10.40-11.10	Open floors for questions
11.10-11.40	Remarks: County officer to identify different categories of resource users in the Sub-County and their different types of needs for water, energy and natural resources to be provided for in the Strategic Plan (will include: institutional, commercial, domestic, men & women, etc) Molu/Bagaja/JJ
11.40-12.10	Presentation:State of knowledge on the characteristics, functioning and user groups of water and energy infrastructure in the Sub-County by Ibrahim Jarso, RAP
12.10-12.40	Plenary Discussions
12.40-2.00	Lunch Break
2.00-2.30	Activity:Community members propose improvements to the participatory resource maps and waterpoints database concerning: <ul style="list-style-type: none"> <li>• Presence, functions, capacities and seasonal uses of the waterpoints (Molu)</li> <li>• Energy sources, functions and mgt responsibilities for the waterpoints (Bagaja)</li> <li>• Environmental hazards, pollution threats and other challenges for natural resource management (JJ)</li> </ul>
2.30-2.40	Activity: Identification 3 focus groups to further define the needs of resource users, and recommendations for the Strategic Plan to address them (groups will include women and men). Selection of members to be facilitated by Caroline and Daoud (notes to be taken by Ibrahim); All the participants get in group which fits them.
2.40-3.00	Activity: Identification of community representatives from each of the focus groups to deliver recommendations to multi-stakeholder meeting (women and men) facilitated by Daoud and WAPC (notes to be taken by Ibrahim); three criteria of selection was agreed on; (2 people from each group which will be
3.00-3.30	Closing Remarks: County Director to recap different categories of resource users in the Sub-County and their different types of needs for water, energy and natural resources to be provided for in the Strategic Plan (will include: institutional (hospitals, schools, mosques, etc), domestic (women, men, youth, elderly), commercial (livestock producers, hotels, restaurants, water vendors, etc)
3.30-4.00	Closing remarks: RAP/Mid-P/IIED
4.00	Closing and house keeping

## Day 2

### Focus group Discussion

#### Leading questions (Probe more as per each question)

1. What is the current situation on access to water in relation to irrigation, Energy, Environment and Natural resources?
2. How much Water do you use per day in each Sector?
3. How much Water do you provide per day? (Managers) how much energy are you using per day?
4. How do you want to see your situation in the next 5 years?

#### The focus group discussions (ran in parallel)

1. Water and energy resource managers (Bagaja, Boru) (Daoud, Ibrahim and Shandey to ensure proper documentation)
2. Domestic and institutional users of water and other natural resources (Caroline, Molu and Adaka)
3. Commercial and productive water energy and natural resource users (JJ, Halkano and Bashir)

This report provides an overview of findings from a series of Sub-County level consultations and preparatory technical meetings intended to inform a county level multi-sectoral Strategic Plan for water, energy and climate change. Lack of such a Strategy and consultation process in Isiolo County, held back progress and limited the effectiveness of many County and donor-supported interventions in the past. This was the first time that County Officers in the Isiolo County Ministry of Water, Energy and Climate Change Isiolo County had explored such a consultative approach to strategic planning. Their sub-county level meetings included participation by over 100 representatives of local customary resource user associations, women's groups, formal water resource user associations, water committees, irrigation committees, ward adaptation planning committees and others, with facilitation from a local NGO (RAP) and IIED. This report describes the approach and the major findings. The recommendations generated through this process should inform planning and budgeting for the coming five years, and also support and feed into ongoing catchment level planning, as well as broader national planning debates in Kenya, particularly those concerning the Arid and Semi-Arid Lands (ASALs). The overall objective of the Strategic Plan is to enable Isiolo County and its neighbouring ASAL counties in Kenya and the Horn of Africa to achieve their full economic potential.
